

Hi, my name is Anu Abraham. The following details are about each page's components to help you guide through. Hope it helps, if there's any confusion, you can contact me

Home Page

- Scrollable page
- As soon as user opens the home page or scrolls it, the Amelia Kraemer video auto plays in the background as a loop, I will wetransfer this video separately.
- There are icons for youtube, twitter and linkedin, as the user hovers over it should show the link and upon clicking, take them to the respective pages.
- Also the text can be somewhere offset to the right or left as per your taste, and you can modify the look and feel of it, and make it readable with video background playing underneath. I have no idea, you can decide this one's position and layout.

“

Creating quality audio-visual content for virtual and television medium is Anu' s main forte. Skilled in video production, editing and motion graphics”

- As the user scrolls below, they can see my video works collection stacked one next to the other. Those are just screenshots of the videos for your reference. You don't have to use them. However when the user hovers over it, the play button should or controls and upon clicking allow them to watch on Youtube
- I have added the youtube links on top of each video so that you can embed them. These videos need not autoplay.

TELEVISION PAGE

- I have provided the links for each video above them. Same as in previous page, while hovering the play button appears . Upon clicking anywhere on the button or the text the user should be able to watch on Youtube.

- Here in the above picture, the user should be able to go to the respective website links if

they click on it or hover over it should show the link of the website.

The rest directions or steps I have mentioned in black boxes.
